

Worming & Vaccine Protocol

We have worked with our Vet, Dr. Marquardt of Rochelle Veterinary Hospital to develop a worming and vaccine protocol that works best for our puppies. The protocol also allows the pups to see Dr. Marquardt twice before they go home at 9 weeks of age.

The following protocol is followed for all puppies

Using Pyrantel we worm for Pinworms, Large Roundworm.

At 2, 4, 6 and 8 weeks of age.

Your pup then needs to be wormed again with Pyrantel at 10 and 12 weeks of age. We can help you decide whether to worm at home or the vet. If at home a quality product will be suggested

Using Panacur we worm for Round, Hook, Whip and Tape worms.

The Panacur helps with possible giardia at the same time.

This we do at 6 and 8 weeks. The pup will need to be wormed with Panacur again at 10 and 12 weeks. As above we can help determine your at home follow up worming with your new baby.

Vaccinations:

Puppies see Dr. Marquardt at age 6 weeks and 9 weeks.

At that time pups receive vaccines of PPVD.

Which is for Parvo influenza, Parvo virus and distemper. They also receive a health checkup at both appointments and a clear to go home at 9 weeks.

At home with you, your pups will need 2 more sets of the PPVD shots at 12 and 15 weeks. This is a must for your puppies health. We do check to make sure your pup has had their follow up PPVD's.

Your vet will schedule your Rabies and Lepto shots following their protocol.
